---	---

The natural characteristics of geometric or linear patterns in carpet tile can result in double-dark or double-light lines at the seam and to some degree a pattern run-off or bias. This is not a manufacturing defect. These characteristics should always be taken into consideration when choosing the installation method of a modular carpet. While select styles are offered in both modular and broadloom formats, they are not an exact match since the equipment used in the manufacturing of both patterns are entirely different. @work is a registered trademark of Kraus®
